It approaches the topic of homework from several perspectives, including its political and cultural contexts aspects of parental involvement and parent-child relationships school contexts and practices observable impacts It highlights homework-specific concerns and considers two principal solutions. Firstly, support initiatives from schools and communities. Secondly, improved homework design, aimed at attracting greater student interest and promoting communication within families. Recommendations for practice and future research are also discussed. A political analysis shows that current confusion about homework might stem from a tension between two prevailing ideologies, one stressing students' improved achievement in competing economies, and the other privileging collaboration between the school, family and community. Is homework an essential component of rigorous schooling or a harmful practice that alienates and discourages a significant number of students? The debate over homework has gone on for decades, but schools and families have changed in many ways, and, as author Cathy Vatterott notes, "There's a growing suspicion that something is wrong with homework." Rethinking Homework: Best Practices That Support Diverse Needs examines the role homework has played in the culture of schooling over the years; how such factors as family life, the media, and the "balance movement" have affected the homework controversy; and what research--and educators' common sense--tells us about the effects of homework on student learning. The best way to address the pro- and anti-homework controversy is not to eliminate homework. Instead, the author urges educators to replace the "old paradigm" (characterized by longstanding cultural beliefs, moralistic views, the puritan work ethic, and behaviorist philosophy) with a "new paradigm" based on the following elements: * Designing quality homework tasks; * Differentiating homework tasks; * Deemphasizing grading of homework; * Improving homework completion; and * Implementing homework strategies and support programs. Numerous examples from teachers and schools that have revised their practices and policies for homework illustrate the new paradigm in action. The end product is homework that works--for all students, at all levels. This work is the second in a series concerned with furthering our understanding of the phenomenon of play in humans and in animals, and across various cultural, social and activity settings.
