**Drawing for Science Education** May 12 2022 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking - sometimes direct observation and in other instances, their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach

classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor-patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike, across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation (Audubon, Linnaeus); A process (how plants grow over time, what happens when chemicals combine); Conceptions of what science is and who does it; Images of identity development in science teaching and learning.

**Sign Bilingualism** Dec 15 2019 This volume provides a unique cross-disciplinary perspective on the external ecological and internal psycholinguistic factors that determine sign bilingualism, its development and maintenance at the individual and societal levels. Multiple aspects concerning the dynamics of contact situations involving a signed and a spoken or a written language are covered in detail, i.e. the development of the languages in bilingual deaf children, cross-modal contact phenomena in the productions of child and adult signers, sign bilingual education concepts and practices in diverse social contexts, deaf educational discourse, sign language planning and interpretation. This state-of-the-art collection is enhanced by a final chapter providing a critical appraisal of the major issues emerging from the individual studies in the light of current assumptions in the broader field of contact linguistics. Given the interdependence of research, policy and practice, the insights gathered in the studies presented are not only of scientific interest, but also bear important implications concerning the perception, understanding and promotion of bilingualism in deaf individuals whose language acquisition and use have been ignored for a long time at the socio-political and scientific levels.

*The First Drawing* Nov 18 2022 Imagine you were born before the invention of drawing, more than thirty thousand years ago. You would live with your whole family in a cave and see woolly mammoths walk by! You might even see images of animals hidden in the shapes of clouds and rocks. You would want to share these pictures with your family, but wouldn't know how. Who would have made the world's first drawing?

Would it have been you? In *The First Drawing*, Caldecott Medal winner Mordicai Gerstein imagines the discovery of drawing...and inspires the young dreamers and artists of today.
