I am writing this book especially for people like me who wanted to learn spray painting and for people who want to paint their own vehicles by themselves, as you know that there is very less knowledge about this topic in the Indian market. I have struggled a lot to get information about the painting, but actually, there is nobody who really wants to share anything about their skill. I finally managed to get some people to whom I paid to get useful information about spray painting and so I started with autospraypaintlearning.com to answer all the questions and problems which you are facing. In this book, I will share some of the important information which you will need to start off with the spray painting. If you follow instructions from this book for sure, you will be able to accomplish painting your vehicle flawlessly, and it will even improve your skills. Spray painting is not as easy as you think it is, if you are really interested in it then only you should jump further in this book. It is not just about spraying the paint, the more important part of painting is the preparation on the surface for painting, once you have prepared the surface

well then only you can get good results, believe me even a slight flaw in your prep will show once you spray the paint. So the moral is you will need lots of patience while doing this, you will get errors, you will mess up somewhere, but that is the part of learning, if you mess up somewhere that doesn't mean that you will not be able to do it, I have messed up many times and I have learned well from it, believe me, this mess will make you a better painter. This guide will give you all the information that you will need to do basic bodywork like removing the dents, laying the primer, sanding the surface for painting and laying the clear coat. The major topic I want to discuss here is safety, most people neglect this topic and then finally end up in a hospital, and that is the end of their career. Make safety your first priority as you will be dealing with harmful chemicals here so make sure you protect your lungs and hands properly, always wear respiratory mask and gloves while handling paints, thinners, reducers, primers, hardeners, and clear coats etc. and of course, use your common sense. Preparing the body for painting is the most important stage in any paint job, if you did not prepare your body well then for sure that you will not get good results. This book can take you to the professional level if you follow each and everything from it carefully. It is a complete step by step guide on how to spray paint your bike, car or just anything else. The process is the same for everything, you just have to know the right process and paint like a professional. This book will cover topics on: *Safety *Tools you will need *Body preparation *Applying putty *Laying primers *Spray painting tips and tricks *Colour sanding and buffing
