Screen Design Manual Nov 12 2021 The Screen Design Manual provides designers of interactive media with a practical working guide for preparing and presenting information that is suitable for both their target groups and the media they are using. It highlights background information and relationships, clarifying them with examples, and encourages the further development of the language of digital media. In addition to the basics of perception and learning psychology, ergonomics, communication theory, imagery research, and aesthetics, the book also considers design navigation and orientation elements. Guidelines and checklists, along with the comprehensive design of the book, support the transfer of information into practice. Frank Thissen teaches multimedia didactics and information design at the University of Applied Sciences in Stuttgart. For over 10 years he has been developing computer based training. He has worked for international companies such as Siemens AG and SAP AG. His research project explores the role of emotion in e-learning > www.frank-thissen.de Key Topics: - Interactive media - Text for the screen - Effective use of pictures - Video, animation, and sound - Screen layout - Orientation and navigation - Interaction - Emotions and metamessages - Intercultural communication

The Highway Design and Maintenance Standards Model: User's manual for the HDM-III model Oct 31 2020 This book describes the Highway Design and Maintenance Standards model (HDM-III) and its constituent components and provides a comprehensive discussion of the submodels, their interaction, and the operational parameters involved. The HDM-III is designed to make comparative cost estimates and economic evaluations of different construction and maintenance options, including different time-staging strategies, either for a given road project on a specific alignment or for groups of links on an entire network. The user can search for the alternative with the lowest discounted total cost and can call for rates of return, net present values, or first-year benefits. If the HDM is used in conjunction with the Expenditure Budgeting Model, the set of design and maintenance options that would minimize total discounted transport costs or maximize net present value of an entire highway system under year-to-year budget constraints can be determined. The HDM-III model is not only a readily usable program for handling voluminous computations automatically, it is also a repository of the most extensive and consistent set of empirical data on the subject. The information includes the qualitative structure and quantitative parameters of relationships among construction standards, maintenance, traffic characteristics, road deterioration, and vehicle operating costs.

SWATHGEN Computer-aided Design System User's Manual Jan 22 2020 SWATHGEN is an interactive computer-aided design program for SWATH ships, written in FORTRAN 77 on a VAX 11/780. It uses TEMPLATE graphics software for plotting. This program produces faired hull forms, including fairing of the strut-lower hull intersection. SWATHGEN interfaces with a resistance calculation program, REPOW, and a wave resistance optimization program, OPTVOL, which contours the lower hull to minimize wave resistance. Swathgen produces a complete mathematical description of the hull surface geometry using parametric cubic splines. This description is used to produce plots (Stations, Waterlines and 3-D Views), to calculate hydrostatic properties and to generate a source panel distribution for wave resistance calculations.
