Real-resumes for Engineering Jobs Sep 21 2022 Civil engineers, mechanical engineers, structural engineers, marine engineers, chemical engineers, systems engineers, and engineering support personnel have a lot in common when they want to create a resume, and this book shows resumes and cover letters of individuals who want to work in the field. For those who seek federal employment, there's a special section showing how to create federal resumes and government applications. Since many technical types aren't writers, this comes as a special gift: select a winning format, plug in your background specs, and away you go. It's that easy--with REAL RESUMES in hand. - The Midwest Book Review1-885288-42-5

Analysis of Senior Noncommissioned Officer Job Positions in Base Level Civil Engineering Oct 18 2019

Senior noncommissioned officer jobs in base civil engineering are evaluated using the Job Characteristics Model: strengths and weaknesses of various positions are identified; and recommendations for overall improvements are made. The Job Diagnostic Survey (JDS), a measurement instrument for the Job Characteristics Model, was

administered to 414 senior noncommissioned officers in CONUS base civil engineering organizations. The following job classifications were surveyed: Prime BEEF NCOs, fire protection superintendents, O & M superintendents, unit supervisors, assistant unit supervisors, and technicians. The results of the survey are analyzed to examine what moderating effects the individual's job position, rank, educational level, and major command of assignment had on the JDS scores. Strengths and weaknesses in each job are also identified by comparing the JDS scores of each position within civil engineering as well as comparing the JDS data for each position to established nationwide normative data representing similar type jobs. The Disaster Experts Apr 04 2021 In the wake of 9/11 and Hurricane Katrina, many are asking what, if anything, can be done to prevent large-scale disasters. How is it that we know more about the hazards of modern American life than ever before, yet the nation faces ever-increasing losses from such events? History shows that disasters are not simply random acts. Where is the logic in creating an elaborate set of fire codes for buildings, and then allowing structures like the Twin Towers—tall, impressive, and risky—to go up as design experiments? Why prepare for terrorist attacks above all else when floods, fires, and earthquakes pose far more consistent threats to American life and prosperity? The

Disaster Experts takes on these questions, offering historical context for understanding who the experts are that influence these decisions, how they became powerful, and why they are only slightly closer today than a decade ago to protecting the public from disasters. Tracing the intertwined development of disaster expertise, public policy, and urbanization over the past century, historian Scott Gabriel Knowles tells the fascinating story of how this diverse collection of professionals—insurance inspectors, engineers, scientists, journalists, public officials, civil defense planners, and emergency managers—emerged as the authorities on risk and disaster and, in the process, shaped modern America.

Practical Leadership Skills for Safety Professionals and Project Engineers Oct 10 2021 For Future Leaders in Safety and Engineering You've chosen to become a leader in occupational health and safety. Practical Leadership

Skills for Safety Professionals and Project Engineers can show you how. Purposely oriented toward the art and science of leadership, this book is designed to provide insight and outline development techniques for the budding young professional. Aimed squarely at college students and early career professionals, it parallels the steps that a student or recent graduate needs to take (from pre-professional to professional); it moves the reader from the classroom and then on through to early managerial years. The book covers basic office protocol and etiquette, understanding diversity and cultural nuance, and ethical considerations, and addresses most ABET-accredited engineering and safety programs with similar curricula. It also considers special cases that include toxic leadership; environmental stressors; increasing resilience; gender issues; international nuance; experiential training; and "depleted" leader development environments where upper management doesn't seem to care. In addition, the author introduces stories, accumulated wisdom, and anecdotes from his own experience, balanced by supported research and data on outcomes. Part empirical, part anecdotal, this book: Cites current social and psychological work on leadership and professional development References industry-related leader development research Breaks down what being a "professional" means; codes of ethics; dilemmas; case studies Explores leadership in the crisis and non-crisis modes Offers help with identifying and fighting toxic leadership, and more Designed for both coursework and reference, Practical Leadership Skills for Safety Professionals and Project Engineers contains published research combined with the author's own industry experience. This book provides a blueprint for the undergraduate or early-career professional in occupational health and safety, industrial hygiene, safety management, and related industries.

panel report was prepared as part of the study of engineering education and practice conducted under the guidance of the National Research Council's Committee on the Education and Utilization of the Engineer. The panel's goal was to provide a data base that describes the engineering work force, its main activities, capabilities, and principal employers. Chapters included are: (1) "Introduction" (discussing the role of engineering); (2) "The Engineering Work Force" (describing the numbers and characteristics, aging and retirement, and women and minorities in engineering); (3) "Utilization of Engineers" (information on employment characteristics and efficiency of utilization); (4) "Quality of the Work Force"; (5) "Resilience of the Work Force"; (6) "International Comparisons"; and (7) "Supply and Demand for Engineers." Many tables and graphs are provided. Appended are data on engineering employment characteristics, a questionnaire and a summary of the results of the informal mail survey of employers of engineers, data on the employment of engineers, and a report on the support of engineering education by the Federal Government. "Women in Engineering" and "The Social Context of Minorities in Engineering" are also included in the appendices. (YP)
