**INSTANT NEW YORK TIMES BESTSELLER** A dramatically new understanding of human history, challenging our most fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. *The Dawn of Everything* fundamentally transforms our understanding of the human past

*and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations Making learning fun and interactive is a surefire way to excite your social studies students. This book includes game-formatted activities for major historical topics. While the goal of these activities is to create excitement and to spark interest in further study, they are also standards based and include grading rubrics and ideas for assessment.*

*Encouraging teamwork, creativity, intelligent reflection, and decision making, the games of Hands-on History Activities will help you take an active approach to teaching while inspiring your students to make their own explorations of history. 176pp.*

Scroll up and Click Buy with One Click!"*

*Volume II presents an account of various population movements and cultural exchanges in Central Asia between 700 B.C. and 250 A.D. Important nomadic tribal cultures such as the Kushans emerged during this period. Contacts between the Mediterranean and the Indus Valley were reinforced by the campaigns of Alexander the Great and, under his successors, the progressive syncretism between Zoroastrianism, Greek religion and Buddhism gave rise to a new civilization instituted by the Parthians, known for its artistic creations. Under Kushan rule, Central Asia became the crossroads of a prosperous trade between the Mediterranean and China along the Silk Route.*

*'An utterly dazzling book, the best piece of history I have read for a long time' Jerry Brotton, author of A History of the World in Twelve Maps 'Not merely an horologist's delight, but an ingenious meditation on the nature and symbolism of time-keeping itself' Richard Holmes*

*The measurement of time has always been essential to human civilization, from early Roman sundials to the advent of GPS. But while we have one eye on the time every day, are we aware of the power clocks have given governments, military leaders and business owners, and how they have shaped our lives and our world? In this spectacularly far-reaching book, David Rooney narrates a history of*

*timekeeping and civilization in twelve concise chapters. Over their course, we meet the most epochal inventions in horological history, from medieval water clocks to Renaissance hourglasses, and from stock-exchange timestamps to satellites in Earth's orbit. We discover how clocks have helped people navigate the globe and build empires, but also, on occasion, taken us to the brink of destruction. This is the story of time, and the story of time is the story of us. A comparative history of civilizations in Asia from prehistoric times to the middle of the 19th century. A comprehensive account of how energy has shaped society throughout history, from pre-agricultural foraging societies through today's fossil fuel-driven civilization. "I wait for new Smil books the way some people wait for the next 'Star Wars' movie. In his latest book, *Energy and Civilization: A History*, he goes deep and broad to explain how innovations in humans' ability to turn energy into heat, light, and motion have been a driving force behind our cultural and economic progress over the past 10,000 years. —Bill Gates, *Gates Notes, Best Books of the Year* Energy is the only universal currency; it is necessary for getting anything done. The conversion of energy on Earth ranges from terra-forming forces of plate tectonics to cumulative erosive effects of raindrops. Life on Earth depends on the photosynthetic conversion of solar energy into plant biomass. Humans have come to rely on many more energy flows—ranging from fossil fuels to photovoltaic generation of electricity—for their civilized existence. In this monumental history, Vaclav Smil provides a comprehensive account of how energy has shaped society, from pre-agricultural foraging societies through today's fossil fuel-driven civilization. Humans*

*are the only species that can systematically harness energies outside their bodies, using the power of their intellect and an enormous variety of artifacts—from the simplest tools to internal combustion engines and nuclear reactors. The epochal transition to fossil fuels affected everything: agriculture, industry, transportation, weapons, communication, economics, urbanization, quality of life, politics, and the environment. Smil describes humanity's energy eras in panoramic and interdisciplinary fashion, offering readers a magisterial overview. This book is an extensively updated and expanded version of Smil's Energy in World History (1994). Smil has incorporated an enormous amount of new material, reflecting the dramatic developments in energy studies over the last two decades and his own research over that time. Illustrates the origin and ways of Western hegemony over other civilizations across the world. In this third volume covering the flourishing period from the third to the eighth century A.D., scholars describe the powerful role played by the Sasanian state in Iran, the Gupta empire in India and the T'ang dynasty in China. Waves of nomadic migrations and the formation of steppe empires left their mark on political and social life. This multiethnic society had its roots in the great religious traditions of Buddhism, Zoroastrianism, Manichaeism, Christianity and Shamanism. The Islamization of a great part of the region brought fundamental changes to all aspects of life. Intensive trade along the Silk Route encouraged cultural and scientific exchanges, making this period one of impressive artistic and intellectual creativity. Civilizations takes the reader forward from the earliest days of human settlement to the civilizations of*

*the New World overthrown by the Spanish Conquistadors.*

**DAILY TELEGRAPH BOOKS OF THE YEAR** *If in the year 1411 you had been able to circumnavigate the globe, you would have been most impressed by the dazzling civilizations of the Orient. The Forbidden City was under construction in Ming Beijing; in the Near East, the Ottomans were closing in on Constantinople. By contrast, England would have struck you as a miserable backwater ravaged by plague, bad sanitation and incessant war. The other quarrelsome kingdoms of Western Europe - Aragon, Castile, France, Portugal and Scotland - would have seemed little better. As for fifteenth-century North America, it was an anarchic wilderness compared with the realms of the Aztecs and Incas. The idea that the West would come to dominate the Rest for most of the next half millennium would have struck you as wildly fanciful. And yet it happened. What was it about the civilization of Western Europe that allowed it to trump the outwardly superior empires of the Orient? The answer, Niall Ferguson argues, was that the West developed six "killer applications" that the Rest lacked: competition, science, democracy, medicine, consumerism and the work ethic. The key question today is whether or not the West has lost its monopoly on these six things. If so, Ferguson warns, we may be living through the end of Western ascendancy. Civilization takes readers on their own extraordinary journey around the world - from the Grand Canal at Nanjing to the Topkapi Palace in Istanbul; from Machu Picchu in the Andes to Shark Island, Namibia; from the proud towers of Prague to the secret churches of Wenzhou. It is the story of sailboats, missiles, land deeds, vaccines, blue jeans and*

*Chinese Bibles. It is the defining narrative of modern world history. Students expand their understanding of history by studying the people and events that ushered in the dawn of the major Western and non-Western ancient civilizations. Based on the idea that communication technologies are a primary shaping force of civilizations, "Five Epochs of Civilization" presents a new scheme of world history. It identifies five epochs of historical experience and associates each with a civilization focused on particular institutions. These are: -- Civilization I focused on government, ending in large political empires -- Civilization II focused on religion, ending in the three world religions -- Civilization III focused on commerce and education within the nation state -- Civilization IV focused on the media of news and entertainment -- Civilization V focused on the internet and beyond The communication technologies which triggered these changes in culture (and their approximate dates of introduction) include: ideographic writing (3100 B.C.), alphabetic writing (800 B.C.), printing (1450 A.D.), electronic recording and broadcasting (1920 A.D.), and computer networks (1990 A.D.). McGaughey includes separate narratives for each of the four civilizations that have appeared to date in a developed form plus 'imaginative and plausible speculations concerning a possible fifth, computer-based civilization'. Discover how humans created their world from the objects they left behind - from the US Constitution to the first iPhone - in DK's latest history ebook. From the beginning of human history, the one thing that has defined us is our talent for making things, from basic technology and everyday objects, such as bowls and hand axes, to high-tech inventions, such as*

*supersonic aircraft, smart devices, and Mars rovers. Objects speak volumes about a civilization, telling us how our ancestors lived - as well as what they believed in and valued. A bronze cat mummy shows us how highly the ancient Egyptians valued their feline companions, while a mechanical tiger toy tells the story of rising tensions between an Indian sultan and European colonisers. With stunning, specially commissioned photography, Civilization shows you the objects that our ancestors treasured - from the jewellery worn by the Mesopotamians to the prized ritual vessels used by the people of the Shang dynasty - and gives you an insight into what gave each culture its own identity. From astrolabes and aeroplanes to vacuum cleaners and X-rays, DK uses its hallmark visual style to weave the extraordinary legacy of our creativity into a unique view of world history that will change the way you see the objects all around us. This book gives serious play to ancient history right across the African continent and it ties these eras into the currents of wider world history. Chris Ehret has skilfully woven archaeology and linguistics into the historical narrative to provide a text from the deep past until 1800. North America: University Press of Virginia A monumental retelling of world history through the lens of maritime enterprise, revealing in breathtaking depth how people first came into contact with one another by ocean and river, lake and stream, and how goods, languages, religions, and entire cultures spread across and along the world's waterways, bringing together civilizations and defining what makes us most human. Lincoln Paine takes us back to the origins of long-distance migration by sea with our ancestors' first forays from Africa and Eurasia to Australia and*

*the Americas. He demonstrates the critical role of maritime trade to the civilizations of ancient Egypt, Mesopotamia, and the Indus Valley. He reacquaints us with the great seafaring cultures of antiquity like those of the Phoenicians and Greeks, as well as those of India and Southeast and East Asia, who parlayed their navigational skills, shipbuilding techniques, and commercial acumen to establish thriving overseas colonies and trade routes in the centuries leading up to the age of European expansion. And finally, his narrative traces how commercial shipping and naval warfare brought about the enormous demographic, cultural, and political changes that have globalized the world throughout the post-Cold War era. This tremendously readable intellectual adventure shows us the world in a new light, in which the sea reigns supreme. We find out how a once-enslaved East African king brought Islam to his people, what the American "sail-around territories" were, and what the Song Dynasty did with twenty-wheel, human-powered paddleboats with twenty paddle wheels and up to three hundred crew. Above all, Paine makes clear how the rise and fall of civilizations can be linked to the sea. An accomplishment of both great sweep and illuminating detail, *The Sea and Civilization* is a stunning work of history. Ancient to Early Modern Times (175,000 B.C.-1500) - English In the tradition of his own bestselling masterpieces *The Story of Civilization* and *The Lessons of History*, Pulitzer Prize-winning historian Will Durant traces the lives and ideas of those who have helped to define civilization, from its dawn to the beginning of the modern world. *Heroes of History* is a book of life-enhancing wisdom and optimism, complete with Durant's wit, knowledge, and*

*unique ability to explain events and ideas in simple, exciting terms. It is the lessons of our heritage passed on for the edification and benefit of future generations—a fitting legacy from America's most beloved historian and philosopher. Will Durant's popularity as America's favorite teacher of history and philosophy remains undiminished by time. His books are accessible to readers of every kind, and his unique ability to compress complicated ideas and events into a few pages without ever "talking down" to the reader, enhanced by his memorable wit and a razor-sharp judgment about men and their motives, made all of his books huge bestsellers. Heroes of History carries on this tradition of making scholarship and philosophy understandable to the general reader, and making them good reading, as well. At the dawn of a new millennium and the beginning of a new century, nothing could be more appropriate than this brilliant book that examines the meaning of human civilization and history and draws from the experience of the past the lessons we need to know to put the future into context and live in confidence, rather than fear and ignorance. Do you want to know how the Human Race got to where it is today? Read about the 50 most important events in human history, from the first civilizations to the birth of the internet. This book is perfect for history lovers. Author James Weber did the research and compiled this huge list of events that changed the course of history forever. Some of them include:- The first civilization in Mesopotamia in 3,000 B.C.- The Norman Invasion of England in 1066- The invention of the printing press by Johannes Guttenberg around 1450- The French Revolution in 1789- The first motorized airplane flight in 1903-*

*The Moonlanding in 1969 and many many more* The book includes pictures and explanations to every event, making this the perfect resource for students and anyone wanting to broaden their knowledge in history. Download your copy now!

Every aspect of Chinese civilization is explained, interpreted, contextualized and brought to life with well-balanced commentary and photographic documentation. Published by City University of Hong Kong Press.

????????????? Written from a consciously anti-ethnocentric approach, this fascinating work is a survey of the civilizations of the modern world in terms of the broad sweep and continuities of history, rather than the "event-based" technique of most other texts. This second part of volume IV deals with the cultural achievements of the various peoples of this immense region: arts and crafts, literature, architecture, music, science, medicine and technology. Presents a continuous narrative of human history worldwide from the earliest civilizations through the European Renaissance. *The Rise and Fall of Civilizations*, a sequel to *The Light of Civilization*, is a study of the history of

*civilizations. Nicholas Hagger describes religion as the basis for civilization. Saints, mystics, gurus, prophets, religious founders, it is these that drive history rather than kings and politicians. He outlines the patterns of the civilizations themselves, providing a unique interpretation of the dynamics of their origin, rise and collapse. Essential reading for students of history, it will interest all seeking to understand historical patterns and the direction in which our civilization is heading today. With the spread of interest-based transactions, major problems such as inequality, poverty and debt-based slavery have emerged. Those who practiced professions such as usury have, despite the negative connotations attributed to them, contributed extensively to the construction of the conventional financial system in the global economy, suggesting that the core concepts in this practice need to be analyzed in greater depth and from a historical perspective. This book analyzes the evolution of interest-bearing debt transactions from ancient times to the era of Abrahamic religions. In modern times, interest is strictly prohibited by Islam, but this book demonstrates that it is a practice that has been condemned and legally and morally prohibited in other civilizations, long before Islam outlawed it. Exploring the roots of this prohibition and how interest has been justified as a viable practice in economic and financial transactions, the book offers deep insight into the current nature of finance and economics, and the distinctive features of Islamic finance in particular and enables researchers to further delve into a review of interest-free financing models. Islamic finance, or alternative financial methods, have become extremely popular particularly in the*

*aftermath of global financial crises, suggesting that they will attract further interest in the future as well. The book is primarily aimed at undergraduate and graduate students but, as it avoids the use of technical jargon, it also speaks to a general readership. It will appeal to those who have an interest in financial history, particularly the history of debt as well. This comprehensive and compelling visual encyclopedia tells the story of our world in true depth and detail, from the origins of life on Earth right up until the 21st century. Human endeavor and achievement are charted and celebrated from every angle, alongside key events, groundbreaking ideas, political forces, and technological advances that have shaped our planet's progress. More than 600 pages chronicle global history in the most informative, illuminating, and inspiring way. Stunning images and illustrations bring the authoritative text to life, so each historical episode is explored and explained for easy reference and understanding. Important points in history, from the Battle of Hastings and the storming of the Bastille to D-day and 9/11, are given clear but concise coverage, together with profiles of influential figures, such as Rameses II, Julius Caesar, and Nelson Mandela. As each moment in history is defined and detailed, the causes and consequences are provided in supporting panels to provide a wider context and broaden our horizons. Contemporary issues, including climate change and the rise of social media, bring us out of the past and firmly into the present. Recently updated and expanded, History is the story of humankind in which we all have a part to play. This classic compendium is a worthy addition to any bookshelf or library for generations of readers to look back in wonder at the world. In*

*this concise, yet sweeping look at the origins and development of ancient new world civilizations, Richard Adams provides a superb introductory overview of these unique and fascinating cultures. Incorporating the latest breakthroughs in the study of the cultures of Mesoamerica and the Andes, Adams examines the development of the Olmec, Maya, Aztec, and Inca peoples, among others, from simple agricultural societies to urban civilizations with complex transportation networks, distinct social hierarchies, rich artistic and religious traditions, and writing systems that have defied anthropological investigation until recently. Ancient civilizations is one 4th grade subject that can be quite difficult to understand just by reading texts. The good news is history picture books exist and they are a joy to study. Pictures provide visual representations of the past. They're easy to remember compared to blocks of text that may not be as descriptive as photos. Order your copy today! A collection of essays by social theorists, historical sociologists and area specialists in classical, biblical and Asian studies. The contributions deal with cultural transformations in major civilizational centres during the "Axial Age," the middle centuries of the last millennium BCE, and their long-term consequences. A compelling evolutionary narrative that reveals how human civilization follows the same ecological rules that shape all life on Earth Offering a bold new understanding of who we are, where we came from, and where we are going, noted ecologist Mark Bertness argues that human beings and their civilization are the products of the same self-organization, evolutionary adaptation, and natural selection processes that have created all other life on Earth. Bertness follows the*

*evolutionary process from the primordial soup of two billion years ago through today, exploring the ways opposing forces of competition and cooperation have led to current assemblages of people, animals, and plants. Bertness's thoughtful examination of human history from the perspective of natural history provides new insights about why and how civilization developed as it has and explores how humans, as a species, might have to consciously overrule our evolutionary drivers to survive future challenges. The second edition of Charles Holcombe's acclaimed introduction to East Asian history from the dawn of history to the twenty-first century. Carroll Quigley was a legendary teacher at the Georgetown School of Foreign Service. His course on the history of civilization was extraordinary in its scope and in its impact on students. Like the course, *The Evolution of Civilizations* is a comprehensive and perceptive look at the factors behind the rise and fall of civilizations. Quigley examines the application of scientific method to the social sciences, then establishes his historical hypotheses. He poses a division of culture into six levels from the abstract to the more concrete. He then tests those hypotheses by a detailed analysis of five major civilizations: the Mesopotamian, the Canaanite, the Minoan, the classical, and the Western. Quigley defines a civilization as "a producing society with an instrument of expansion." A civilization's decline is not inevitable but occurs when its instrument of expansion is transformed into an institution--that is, when social arrangements that meet real social needs are transformed into social institutions serving their own purposes regardless of real social needs.*
