Intelligent Tutoring Systems May 18 2022 Welcome to the proceedings of the 7th International Conference on Intelligent Tutoring Systems! In keeping with the rich tradition of the ITS conferences, ITS 2004 brought together an exciting mix of researchers from all areas of intelligent tutoring systems. A leading international forum for the dissemination of original results in the design, implementation, and evaluation of ITSS, the conference drew researchers from a broad spectrum of disciplines ranging from artificial intelligence and cognitive science to psychology and educational psychology. Beginning with the first ITS conference in 1988, the gathering has developed a reputation as an outstanding venue for AI-based learning environments. Following on the great success of the first meeting, subsequent conferences have been held in 1992, 1996, 1998, 2000, and 2002. The conference has consistently been a vibrant convocation of scientists, developers, and practitioners from all areas of the field. Reflecting the growing international involvement in the field, ITS 2004 was hosted in Brazil. The previous conferences were convened in Canada, the USA, and Europe. We are grateful to the Brazilian ITS community for organizing the first ITS conference in Latin America--in Maceiõ, Alagoas. With its coconut palm-lined beaches and warm, crystal-clear waters, Maceiõ, the capital city of the state of Alagoas, is fittingly known as "The Water Paradise." The conference was held at the Ritz Lagoa da Anta Hotel, which is by Lagoa da Anta Beach and close to many of the city's beautiful sights.

Passibility Mar 04 2021 This book argues that the 'constructivist metaphor' has become a self-appointed overriding concept that suppresses other modes of thinking about knowing and learning science. Yet there are questions about knowledge that constructivism cannot properly answer, such as how a cognitive structure can intentionally develop information that is more complex than itself; how a learner can aim at a learning objective that is, by definition, initially unknown; how we learn through pain, suffering, love or passion; and the role emotion and crises play in knowing and learning. In support of the hypothesis that passibility underlies cognition, readers are provided with a collation of empirical studies and phenomenological analyses of knowing and learning science—in schools, scientific laboratories, and everyday life—all of which defy a constructivist explanation. The author argues that 'passibility' constitutes an essential factor in the development of consciousness, with a range of essential experiences that cannot be brought into the linguistic realm. His exploration is guided by concepts such as 'otherness', passion, passivity and undecidability, and concludes by resituating the construction metaphor to accord it its proper place in a more comprehensive theory of learning.

Performance and Confidence Levels of Students Entering Physics at Three South African Universities Dec 19 A test instrument, made up of 25 items, derived from existing standardized tests from literature, was used to probe the students' knowledge and understanding of basic mechanics concepts, as well as the confidence in the correctness of their answers. The test was administered to 982 first entering physics students: enrolled at three South African universities, at the beginning of the year before any formal instruction could take place. Data collected for this study included students' responses from multiple-choice questions and open-ended explanations to their chosen answers. The analysis of the multiple-choice responses and the written explanations revealed the existence of alternative conceptions among students and that the students' accuracy of judgment about their knowledge and understanding of basic mechanics concepts is different among the different cohorts. Physics education research, has over a number of years, revealed that students have alternative conceptions about physical processes. These alternative conceptions accumulated from the students' past personal experiences, interactions with people around them and the environment they live in. It was found from the study that the strength of the known alternative conceptions differs among the different cohorts. There are those alternative conceptions that are easier to correct with sound teaching. These alternative conceptions exist mostly in worst performing cohorts and less so in the best performing cohorts. There are those alternative conceptions that persisted despite better teaching. These alternative conceptions are found in the best performing cohorts. The certainty of response analysis revealed the differences in the relationship between performance and confidence among the students from the three universities. It was also found that students make incorrect judgments about their knowledge and understanding of basic mechanics concepts. The overall trend emerging from the study was that students seem to be overconfident about their knowledge and understanding of basic mechanics concepts. It was found that students with a good command of mechanics concepts made the best judgment about the correctness of their answers. The item-by-item analysis of students' responses revealed that in most cases the best performing students make quality judgment about their performance, while poor performing students always make inaccurate judgments about their performance. Analysis of the students' written explanations and item difficulty revealed that the Haslam et al. (1999) study is lacking in the differentiation between lack of analytical skills and the presence of alternative conceptions. Lack of analytical skills cannot be classified as evidence of the presence of alternative conceptions. A student may be having knowledge of the necessary concepts, but lack higher order analytical skills to be able to interpret situation presented.

Updating the Interpretive Turn May 26 2020 This collection of essays explores the meaning of the interpretive turn in the philosophy of the human sciences for a variety of contemporary philosophical debates. While hermeneutics seems to be firmly established as a tradition and methodology in the human sciences, interpretive philosophy seems to be under increasing pressure in recent philosophical trends such as the "posthuman turn," the "nonhuman turn," and the "speculative turn." Responding to this predicament, this book shows how hermeneutics is gaining new force and fresh applications today by bringing together a group of leading interpretive philosophers to address such timely topics as the entanglement of social science, culture, and politics in liberal capitalist societies, the extremism with which some identities are held within those societies, the possibility of genuine, non-relativist dialogue in a "post-truth" era, the nature of the strong moral judgments people tend to make in that era, the significance of interpretation for understanding nonhuman life forms, and the inherently hermeneutic dimension of such practical work and productive action, testimony and witnessing, and measurement in scientific practice. Updating the Interpretive Turn will be of interest to researchers working in critical social science, social philosophy, ethical theory, environmental philosophy, philosophy of work, philosophy of testimony, philosophy of measurement, and philosophical hermeneutics itself.

Think Like a Rocket Scientist on 07 2021 * One of Inc.com's "6 Books You Need to Read in 2020 (According to Bill Gates, Satya Nadella, and Adam Grant)"* Adam Grant's # 1 pick of his top 20 books of 2020* One of 6 Groundbreaking Books of Spring 2020 (according to Malcolm Gladwell, Susan Cain, Dan Pink, and Adam Grant). A former rocket scientist reveals the habits, ideas, and strategies that will empower you to turn the seemingly impossible into the possible. Rocket science is often celebrated as the ultimate triumph of technology. But it's not. Rather, it's the apex of a certain thought process -- a way to imagine the unimaginable and solve the unsolvable. It's the same process that enabled Neil Armstrong to take his giant leap for mankind, that allows spacecraft to travel millions of miles through outer space and land on a precise spot, and that brings us closer to colonizing other planets. Fortunately, you don't have to be a rocket scientist to think like one. In this accessible and practical book, Ozan Varol reveals nine simple strategies from rocket science that you can use to make your own giant leaps in work and life, whether it's landing your dream job, accelerating your business, learning a new skill, or creating the next breakthrough product. Today, thinking like a rocket scientist is a necessity. We all encounter complex and unfamiliar problems in our lives. Those who can tackle these problems -- without clear guidelines and with the clock ticking -- enjoy an extraordinary advantage. Think Like a Rocket Scientist will inspire you to take your own moonshot and enable you to achieve liftoff.

The Fruits of Opportunism Mar 16 2022 An in-depth examination of the regulatory, entrepreneurial, and organizational factors contributing to the expansion and transformation of China's supplemental education industry. Like many parents in the United States, parents in China, increasingly concerned with their children's academic performance, are turning to for-profit tutoring businesses to help their children get ahead in school. China's supplemental education industry is now the world's largest and most vibrant for-profit education market, and we see its influence on the US higher education system: more than 70% of Chinese students studying in American universities have taken test preparation classes for overseas standardized tests. The Fruits of Opportunism offers a much-needed thorough investigation into this industry. This book examines how opportunistic organizations thrive in an ambiguous policy environment and how they catalyzed organizational and institutional changes in this industry. A former insider in China's Education Industry, sociologist Le Lin shows how and why this industry evolved to become a for-profit one dominated by private, formal, nationally operating, and globally financed corporations, despite restrictions the Chinese state placed on the industry. Looking closely at the opportunistic organizations that were founded by marginal entrepreneurs and quickly came to dominate the market, Lin finds that as their non-compliant practices spread across the industry, these opportunistic organizations pushed privatization and marketization from below. The case of China's Education Industry laid out in The Fruits of Opportunism illustrates that while opportunism leaves destruction in its wake, it can also drive the formation and evolution of a market.
