FORMAT OF THE SAT II: CHEMISTRY

The SAT II: Chemistry is a one-hour exam consisting of 85 multiple-choice questions. The first part of the exam consists of classification questions. This question type presents a list of statements or questions that you must match up with a group of choices lettered (A) through (E). Each choice may be used once, more than once, or not at all. The exam then shifts to relationship analysis questions which you will answer in a specially numbered section of your answer sheet. You will have to determine if each of two statements is true or false and if the second statement is a correct explanation of the first. The last section is composed strictly of multiple-choice questions with choices lettered (A) through (E).

STUDYING FOR THE SAT II: CHEMISTRY

It is very important to choose the time and place for studying that works best for you. Some students may set aside a certain number of hours every morning to study, while others may choose to study at night before going to sleep. Other students may study during the day, while waiting on line, or even while eating lunch. Only you can determine when and where your study time will be most effective. Be consistent and use your time wisely. Work out a study routine and stick to it! When you take the practice tests, try to make your testing conditions as much like the actual test as possible. Turn your television and radio off, and sit down at a quiet desk or table free from distraction. Make sure to clock yourself with a timer. As you complete each practice test, score it and thoroughly review the explanations to the questions you answered incorrectly; however, do not review too much at any one time. Concentrate on one problem area at a time by reviewing the questions and explanations, and by studying our review until you are confident you completely understand the material. Keep track of your scores. By doing so, you will be able to gauge your progress and discover general weaknesses in particular sections. You should carefully study the reviews that cover your areas of difficulty, as this will build your skills in those areas.

TEST TAKING TIPS

Although you may be unfamiliar with standardized tests such as the SAT II: Chemistry Subject Test, there are many ways to acquaint yourself with this type of examination and help alleviate your test-taking anxieties. Become comfortable with the format of the exam. When you are practicing to take the SAT II: Chemistry Subject Test, simulate the conditions under which you will be taking the actual test. Stay calm and pace yourself. After simulating the test only a couple of times, you will boost your chances of doing well, and you will be able to sit down for the actual exam with much more confidence. Know the directions and format for each section of the test. Familiarizing yourself with the directions and format of the exam will not only save you time, but will also ensure that you are familiar enough with the SAT II: Chemistry Subject Test to avoid nervousness (and the mistakes caused by being nervous). Do your scratchwork in the margins of the test booklet. You will not be given scrap paper during the exam, and you may not perform scratchwork on your answer sheet. Space is provided in your test booklet to do any necessary work or draw diagrams. If you are unsure of an answer, guess. However, if you do guess - guess wisely. Use the process of elimination by going through each answer to a question and ruling out as many of the answer choices as possible. By eliminating three answer choices, you give yourself a fifty-fifty chance of answering correctly since there will only be two choices left from which to make your guess. Mark your answers in the appropriate spaces on the answer sheet. Fill in the oval that corresponds to your answer darkly, completely, and neatly. You can change your answer, but remember to completely erase your old answer. Any stray lines or unnecessary marks may cause the machine to score your answer incorrectly. When you have finished working on a section, you may want to go back and check to make sure your answers correspond to the correct questions. Marking one answer in the wrong space will throw off the rest of your test, whether it is graded by machine or by hand. You don't have to answer every question. You are not penalized if you do not answer every question. The only penalty results from answering a question incorrectly. Try to use the guessing strategy, but if you are truly stumped by a question, remember that you do not have to answer it. Work quickly and steadily. You have a limited amount of time to work on each section, so you need to work quickly and steadily. Avoid focusing on one problem for too long. Before the Test Make sure you know where your test center is well in advance of your test day so you do not get lost on the day of the test. On the night before the test, gather together the materials you will need the next day: - Your admission ticket - Two forms of identification (e.g., driver's license, student identification card, or current alien registration card) - Two No. 2 pencils with erasers - Directions to the test center - A watch (if you wish) but not one that makes noise, as it may disturb other test-takers On the day of the test, you should wake up early (after a good night's rest) and have breakfast. Dress comfortably, so that you are not distracted by being too hot or too cold while taking the test. Also, plan to arrive at the test center early. This will allow you to collect your thoughts and relax before the test, and will also spare you the stress of being late. If you arrive after the test begins, you will not be admitted to the test center and you will not receive a refund. During the Test When you arrive at the test center, try to find a seat where you feel most comfortable. Follow all the rules and instructions given by the test supervisor. If you do not, you risk being dismissed from the test and having your scores canceled. Once all the test materials are passed out, the test instructor will give you directions for filling out your answer sheet. Fill this sheet out carefully since this information will appear on your score report. After the Test When you have completed the SAT II: Chemistry Subject Test, you may hand in your test materials and leave. Then, go home and relax! When Will I Receive My Score Report and What Will It Look Like? You should receive your score report about five weeks after you take the test. This report will include your scores, percentile ranks, and interpretive information. Coverage of disaster management includes the stages of disaster response, nursing roles, and personal case studies of actual disasters and public health emergencies around the world, e.g., natural disasters, global earthquakes, radiation disasters, chemical disasters, biologic or infectious disease outbreaks, and man-made disasters. Actual Disasters unit provides a description of each event, preparedness, response, recovery, personal preparedness equipment, legal and ethical issues, special considerations, and lessons learned. Tabletop exercises and drills allow organizations and institutions to assess their readiness, determine community vulnerabilities, and prepare appropriate responses to disaster events such as an active shooter, cyberattacks, and the grid/power going down. Case studies help you learn to apply concepts to practice. User-friendly content includes definitions of key terms and the role expectations for different nurse specialties and levels. Discussions of International Council of Nurses' Core Competencies in Disaster Nursing use this benchmark as an outline for effective nursing practice before, during, and after disasters. Reviews of psychiatric/mental health issues discuss interventions to improve mental health following disasters. Expert contributors share perspectives and experience from a number of different countries.

The enclosed CD-ROM presents two full-length practice tests with answers, explanations, and automatic scoring. The guiding principle in writing this book was to create a textbook for students- a textbook that presents the material in a way that they learn to solve all the questions along with the strategy to approach the problems. In this book we mixed all our teaching experience of 15 years along with theoretical and experimental knowledge to generate a hand book for all students to reason their way to a solution rather than memorize a multitude of facts, hoping they don't run out of memory. This book covers mainly 6 units with 59 sections which are real concepts of Organic chemistry, which involves Chemical reactions which a students must know in dealing any chemical reactions. Organic chemistry is very easy and conceptual subject and need proper understanding of the basics and strategy to solve the questions in correct manner. This book will prepare your right mindset for learning Organic Chemistry. This mindset is essentially the one that focuses you on a small number of straight forward, repeated, fundamental concepts and helps you to apply them in different ways to solve the variety of problems you face in organic chemistry. This book is complete as it not only covers theory in proper sequence but also provide varieties of questions along with 12 test papers to judge your knowledge before going to start chemical reactions. In this book balance has to be achieved between the number of questions and the quality of the questions, especially because it is relatively easy to frame a very large number of multiple-choice questions and theory of the subject. The questions in this book have been selected keeping three things in mind. First- the questions are such that they really test the understanding of the subject. Second- the questions cover all concepts. Third- the number of questions has been kept large enough to offer meaningful practice to the students. This manual's opening section describes every aspect of the test, offers study advice for its several parts, and presents a diagnostic test with answers and explanations. Following chapters review all the major test topics, including atomic structure and the periodic table; bonding; chemical formulas; gases and gas laws; stoichiometry; liquids, solids, and phase changes; chemical reactions and thermochemistry; rates of chemical reactions; chemical equilibrium; acids, bases, and salts; oxidation-reduction and electrochemistry; and much more. Founded in 1959 with the purpose of disseminating the most recently developed scientific information to groups in industry, government, high schools, and universities, REA has since become a successful and highly respected publisher of study aids, test preps, handbooks, and reference works. REA's Test Preparation series includes study guides for all academic levels in almost all disciplines. Research & Education Association publishes test preps for students who have not yet completed high school, as well as high school students preparing to enter college. Students from countries around the world seeking to attend college in the United States will find the assistance they need in REA's publications. For college students seeking advanced degrees, REA publishes test preps for many major graduate school admission examinations in a wide variety of disciplines, including engineering, law, and medicine. Students at every level, in every field, with every ambition can find what they are looking for among REA's publications. While most test preparation books present practice tests that bear little resemblance to the actual exams, REA's series presents tests that accurately depict the official exams in both degree of difficulty and types of questions. REA's practice tests are always based upon the most recently administered exams, and include every type of question that can be expected on the actual exams. REA's publications and educational materials are highly regarded and continually receive an unprecedented amount of praise from professionals, instructors, librarians, parents, and students. Our authors are as diverse as the fields represented in the books we publish. They are well-known in their respective disciplines and serve on the faculties of prestigious high schools, colleges, and universities throughout the United States and Canada. PREFACE This book provides an accurate and complete representation of the Advanced Placement Examination in Chemistry. Our six practice exams are based on the most recently administered Advanced Placement Chemistry Exams. Each exam is three hours in length and includes every type of question that can be expected on the actual exam. Following each exam is an answer key complete with detailed explanations designed to clarify and contextualize the material. By completing all six exams and studying the explanations which follow, you can discover your strengths and weaknesses and thereby become well prepared for the actual exam. The formulas and tables for the AP Chemistry Exam can be found at the back of this book, beginning on page 417. You will be provided these formulas and tables when you take the actual exam. You should also use this material when taking the practice tests in this book. ABOUT THE TEST The Advanced Placement Chemistry Examination is offered each May at participating schools and multi-school centers throughout the world. The Advanced Placement Program is designed to allow high school students to pursue college-level studies while attending high school. The participating colleges, in turn, grant credit and/or advanced placement to students who do well on the examinations. The Advanced Placement Chemistry course is designed to be the equivalent of a college introductory chemistry course, often taken by chemistry majors in their first year of college. Since the test covers a broad range of topics, no student is expected to answer all of the questions correctly. The exam is divided into two sections: 1) Multiple-choice: Composed of 75 multiple-choice questions designed to test your ability to recall and understand a broad range of chemical concepts and calculations. This section constitutes 45% of the final grade and you are allowed 90 minutes for this portion of the exam. Calculators are not permitted for this section of the exam. 2) Free-response section: Composed of several comprehensive problems and essay topics. This section constitutes 55% of the final grade and the student is allowed 90 minutes for this portion of the exam. You may choose from the questions provided. These problems and essays are designed to test your ability to think clearly and to present ideas in a logical, coherent fashion. You can bring an electronic hand-held calculator for use on the 40-minute free-response section. Essay and chemical-reaction questions comprise the last 50 minutes of the test, during which calculators are not permitted. A final note about calculators: Most hand-held models are allowed in the test center; the only notable exceptions are those with typewriter-style (QWERTY) keypads. If you are unsure if your calculator is permitted, check with your teacher or Educational Testing Service. SCORING The multiple-choice section of the exam is scored by crediting each correct answer with one point, and deducting only partial credit (one-fourth of a point) for each incorrect answer. Omitted questions receive neither a credit nor a deduction. The essay section is scored by a group of more than 1,000 college and high school educators familiar with the AP Program. These graders evaluate the accuracy and coherence of the essays accordingly. The grades given for the essays are combined with the results of the multiple-choice section, and the total raw score is then converted to the program's five-point scale: 5 - Extremely well qualified 4 - Well qualified 3 - Qualified 2 - Possibly qualified Find the newest peanut allergy research including new treatments. Get at-risk infant feeding recommendations plus the latest laboratory tests for determining risk. The Book Provides A Self-Study Of Different Topics Of Organic Chemistry Viab Problem Solving. Managing Personality is grounded in the conviction that scientific understanding of personality requires measurement in order to describe phenomena in an objective, systematic fashion and to test theories. Many have argued that science progresses with improvements in instrumentation and methodology. The critical issue in the study of personality is being sure that each concept or theoretical term is measurable, with procedures that can be specified and observed. This book is concerned with tactics and strategies for improving the relationships between ideas and observations. By contributing to advances in personality measurement, this book seeks to further the science of personality. Fiske is convinced of the importance of developing concepts, variables, and dimensions applicable to all people, rather than the personality of an individual person. Although case studies of personality is necessary for efforts to help individuals in the clinic, finding and measuring common personality attributes is more important to the development of a science of personality. Managing Personality was written for two groups of people. It is intended to present the status quo to those who want a synthesis of personality measurement as it exists. Such people may have some general interest in the field or may be interested in it because they intend to work in such related areas as clinical practice. The second audience includes students of personality who are concerned with evaluating the measurement of personality, and especially people who are conducting such research or are preparing themselves for such work. There are so many reactions to learn in Organic Chemistry that it is sometimes hard to know where to even begin. When you study reactions of alkenes, for example, each has several considerations that you need to know in order to get the right product. What groups add to the alkene? Is addition Markovnikov or anti-Markovnikov? Is addition syn- or anti-? Can the structure rearrange during the course of the reaction? What is the arrow-pushing mechanism? Then there are the SN1, SN2, E1 and E2 reactions. What is the best solvent? What is the stereochemistry of the product? And so on. It can be difficult to sort through a textbook to find the answers to these key questions. This book has a simple format that lists each reaction in its own section answering the questions listed above and many more! For each reaction the general reactant, condition and product combination is provided, followed by notable points in a concise bullet point list. On the next page the arrow pushing mechanism is provided along with key notes on stereochemistry. Finally, there is a quick one page self-test (with answers on the following page) for each reaction so that you will actually have an idea of how well prepared you are for your exams or quizzes on the reactions.
